Seamless Efficiency

## Cathedral Hygiene switches to a Rental and Service solution with NetSolCQ's LeaseSoft.

Cathedral Hygiene and NetSolCQ are pleased to announce the successful implementation of LeaseSoft to manage all Cathedral Hygiene's finance rental agreements and provide their equipment service operations with a fully integration service solution.

With expansion in mind, together with increased levels of performance and flexibility Cathedral Hygiene recognised that a new smarter method of operations was required. In implementing an integrated service and rental solution Cathedral Hygiene now have a single client view that includes rental and service history, improved efficiencies by avoiding duplication and a number of automated service management tasks.

The additional service module added to LeaseSoft provides functionality to manage teams of service engineers, including the allocation of tasks, time management and distribution of job sheets via automated fax or email. It provides a schedule of all service and maintenance tasks grouped appropriately for efficient engineer allocation and tracks the rented assets. This new functionality, seamlessly built into the LeaseSoft financial solution provides a fully integrated rental, service and engineer management solution and replaces two separate service and rental systems. Cathedral Hygiene is now well positioned for growth.

Cathedral Hygiene's managing director David Gooder commissioned NetSolCQ to provide the solution. "As a longstanding client of NetSolCQ I was confident that the major task of developing and implementing a fully integrated service system was in safe hands and would meet current and future needs. With the LeaseSoft solution we now have a fully integrated rental, service and engineer management system that can deal more effectively with business demands, deliver further efficiency improvements and provide even greater customer service value."

Ivor Tarrant, NetSolCQ Project Sponsor, added: "We were delighted to deliver a solution that integrates Cathedral Hygiene's sales, service and finance capabilities and that will also provide an ideal platform to explore other leading-edge technologies to further improve service levels."

The solution, based on the NetSolCQ LeaseSoft Asset Finance system, highlights the flexibility of a LeaseSoft tailored solution and opens up new and exciting opportunities for NetSolCQ to provide integrated solutions to other service-oriented businesses across a variety of sectors.

### Editors Notes

#### About Cathedral Hygiene

Cathedral Hygiene provides washroom facilities, supplies and service to a wide range of private/public organisations and companies on a range of fully serviced rental agreements. Cathedral Hygiene has achieved top five status through a commitment to high levels of service, a focus on sustainable competitive pricing and a commitment to deliver ongoing improvements to service and facilities.
